

ACE NIGERIA · BUSINESS MODEL WORKBOOK · 9 BLOCK CANVAS			
TalkPDF			
MEMBERS	lukman abimbola, Andrew Thomas Kantiok, Rukayat Nurudeen		
TERM	24 Aug 2026 – 18 Sep 2026		
PRINTED	15 September 2026		

01 Problem

For Nigerian secondary-school students preparing for major exams, especially WAEC/WASSCE and JAMB, the repeated problem is Students can study, attend classes, practise questions, and still carry important learning gaps without knowing exactly what they do not understand. because Learning gaps are often discovered reactively through tests, classwork, poor results or a teacher's follow-up question rather than through continuous, topic-level diagnosis and verification..

02 Solution

TalkPDF is building An AI-powered learning-gap resolution platform for Nigerian learners and schools, for Students, supported by parents/guardians and teachers/schools. to achieve Students close priority learning gaps earlier, improve demonstrated understanding, and enter major exams with clearer evidence of what they know and what still needs work..

03 UVP

We help Nigerian students preparing for WAEC/WASSCE, JAMB and related secondary-school learning goals, with parents and schools as important decision-makers and supporters. do Identify and close the learning gaps that stand between a student and stronger understanding/exam readiness, better by Connect diagnosis, targeted intervention, Explain-Back verification and reassessment in one continuous loop. aligned to the learner's syllabus and learning objectives., unlike Generic AI chat, standalone question banks, conventional LMS/reporting tools, and tutoring that may provide help without a continuous learning-gap history..

04 Unfair Advantage

A competitor starting today would need Sustained learner usage, high-quality curriculum/objective mapping, validated evaluation data, tutor-quality data and longitudinal outcome data. because The value compounds as TalkPDF observes not just what students answer incorrectly, but what they misunderstand, what intervention they receive, how they explain the concept afterward, and whether the gap actually closes..

05 Customer Segments

Primary ICP: Secondary-school students in Nigeria preparing for WAEC/WASSCE and/or JAMB. in Nigeria initially, with expansion to other African markets after the Nigerian model is validated., behavior: Studies through school lessons, textbooks, past questions, extra lessons, peers, tutors and digital tools; discovers weaknesses through tests/classwork and seeks help when performance or understanding is affected., JTBD: Identify what the learner does not understand, fix the highest-priority gaps, verify understanding and improve exam readiness..

06 Key Metrics

Key Metric 1: Activation rate - Activated learners / new learner accounts - Target: 100; then improve month over month

Key Metric 2: Diagnostic completion rate - Learners completing first diagnostic / learners who start - Target: Primary activation-quality metric

Key Metric 3: Gap identification rate - Learners with ≥1 actionable learning gap / completed diagnostics - Target: Monitor whether diagnostics produce useful signals

Key Metric 4: Intervention completion rate - Completed interventions / assigned interventions - Target: Measure whether identified gaps lead to action

Key Metric 5: Explain-Back participation - Learners completing Explain-Back / eligible intervention learners - Target: Product-adoption metric; preference still to validate

Key Metric 6: Reassessment completion rate - Completed reassessments / learners due for reassessment - Target: Core proof-loop metric

Key Metric 7: Gap-resolution rate - Gaps resolved after intervention / gaps entering intervention - Target: North-star learning outcome candidate

Key Metric 8: Persistent-gap rate - Gaps remaining after defined intervention cycle / gaps entering cycle - Target:

07 Channels

Primary channel: Exam-focused diagnostic/scorecard acquisition: Ad or partner promotion → free diagnostic/scorecard → personalised result → account → learning-gap assessment → intervention → reassessment → subscription/tutor/referral.. Trust tactic: Lead with a useful diagnostic or scorecard, show a personalised result, then ask for account creation. Demonstrate value before asking for payment.. CAC assumption: Must be measured by channel and conversion stage..

Shows where tutor escalation may be needed
Key Metric 9: Learning improvement - Change in reassessment score/mastery measure vs. baseline - Target: Outcome metric, not vanity metric
Key Metric 10: Paid conversion - New paying customers / eligible free users - Target: Business validation metric

08 Cost Structure

COGS: Naira 15,000
Operation Cost: Naira 330,000
Customer Acquisition Cost: Naira 600,000
Other Costs: Naira 2,400,000
Total Cost: Naira 3,345,000

09 Revenue Streams

Model 1: Freemium = Naira 0
Model 2: Subscription = Naira 0
Model 3: Commission = Naira 0
